**A29. Capital Adequacy**

The capital adequacy ratios of the Banking Group are computed in accordance with Bank Negara Malaysia's Capital Adequacy Framework. The Framework sets out the approach for computing regulatory capital adequacy ratios, as well as the levels of those ratios at which banking institutions are required to operate. The framework is to strengthen capital adequacy standards, in line with the requirements set forth under Basel III. The risk-weighted assets of the Banking Group are computed using the Standardised Approach for credit risk and market risk, and the Basic Indicator Approach for operational risk.

On 13 October 2015, BNM issued the revised Capital Adequacy Framework (Capital Components and Basel II - Risk-weighted Assets) ("Revised Framework") which became effective from 1 January 2016 for all banking institutions and will take effect for all financial holding companies on 1 January 2019.

The minimum regulatory capital adequacy ratios before including capital conservation buffer and countercyclical capital buffer for CET I capital ratio, Tier I capital ratio and total capital ratio are 4.5%, 6.0% and 8.0% respectively.

Banking institutions are also required to maintain a capital conservation buffer of up to 2.5% and a countercyclical capital buffer above the minimum regulatory capital adequacy ratios. Under the transition arrangements, capital conservation buffer will be phased-in as follows:

<b>Calendar Year</b>	<b>Capital Conservation Buffer</b>
2016	0.625%
2017	1.250%
2018	1.875%
2019 onwards	2.500%

Under the Revised Framework, a countercyclical capital buffer is required to be maintained if this buffer is applied by regulators in countries which the Group has exposures to, determined based on the weighted average of prevailing countercyclical capital buffer rates applied in that jurisdictions. The countercyclical buffer which is in a range of between 0% and 2.5% is not a requirement for exposures in Malaysia but may be applied by regulators in the future.

The capital adequacy ratios of the Banking Group are as follows:

**A31. Fair Value Measurements**

(a) Determination of fair value and fair value hierarchy

MFRS 13 Fair Value Measurements require disclosure of financial instruments measured at fair value to be categorised according to a hierarchy of valuation techniques, whether the inputs used are observable or unobservable. The following level of hierarchy are used for determining and disclosing the fair value of the financial instruments:

Level 1 - quoted prices (unadjusted) in active markets for identical assets or liabilities;

Level 2 - inputs other than quoted prices included within level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices); and

Level 3 - inputs for the asset or liability that are not based on observable market data (unobservable inputs).

The Group recognise transfers between levels of the fair value hierarchy at the end of the reporting period during which the transfer has occurred. The fair value of an asset to be transferred between levels is determined as of the date of the event or change in circumstances that caused the transfer.

(i) Financial instruments in Level 1

The fair value of financial instruments traded in active markets is based on quoted market prices at the reporting date. A market is regarded as active if quoted prices are readily and regularly available from an exchange and those prices represent actual and regularly occurring market transactions on an arm's length basis. This includes listed equities and corporate debt securities which are actively traded.

(ii) Financial instruments in Level 2

Where fair value is determined using quoted prices in less active markets or quoted prices for similar assets and liabilities, such instruments are generally classified as Level 2. In cases where quoted prices are generally not available, the Group then determine fair value based upon valuation techniques that use as inputs, market parameters including but not limited to yield curves, volatilities and foreign exchange rates. The majority of valuation techniques employ only observable market data and so reliability of the fair value measurement is high. These would include government securities, corporate private debt securities, corporate notes, repurchase agreements and most of the Group's derivatives.

(iii) Financial instruments in Level 3

The Group classifies financial instruments as Level 3 when there is reliance on unobservable inputs to the valuation model attributing to a significant contribution to the instrument value. Valuation reserves or pricing adjustments where applicable will be used to converge to fair value.

The valuation techniques and inputs used generally depend on the contractual terms and the risks inherent in the instrument as well as the availability of pricing information in the market. Principal techniques used include net tangible assets, discounted cash flows, and other appropriate valuation models. These includes private equity investments.

For the financial assets and liabilities subject to enforceable master netting arrangements or similar arrangements, each agreement between the Group and the counterparty allows for net settlement of the relevant financial assets and liabilities when both elect to settle on a net basis. In the absence of such an election, financial assets and liabilities will be settled on a gross basis, however, each party to the master netting agreement or similar agreement will have the option to settle all such amounts on a net basis in the event of default of the other party.

Swaps

Swaps are contractual agreements between two parties to exchange exposures in foreign currency or interest rates.

Spots

Options

Options are contractual agreements under which the seller grants the purchaser the right, but not the obligation, either to buy (a call option) or sell (a put option) at or by a set date during a set period, a specific amount of an underlying asset at a predetermined price. The seller receives a premium from the purchaser in consideration of risk. Options may be either exchange-traded or negotiated between the purchaser and the seller in the over-the-counter market.

Related accounting policies

Derivative financial instruments are initially recognised at fair value, which is normally zero or negligible at inception except for options and subsequently re-measured at their fair value. The fair value of options at inception is normally equivalent to the premium received (for options written) or paid (for options purchased). All derivatives are carried as assets when fair value is positive and as liabilities when fair value is negative. Changes in the fair value are recognised in the statement of comprehensive income.

Interest income and expenses associated with interest rate swaps are recognised over the life of the swap agreement as a component of interest income or interest expense.

Accordingly, the unrealised retained profits of the Group and the Company as disclosed above excludes translation gains and losses on monetary items denominated in a currency other than the functional currency and foreign exchange contracts, as these gains and losses are incurred in the ordinary course of business of the Group and the Company, and are hence deemed as realised.
