BASEL II PILLAR 3 REPORT
FOR THE FINANCIAL YEAR ENDED 31 MARCH 2026

1.0 Overview

Bank Negara Malaysia ("BNM")'s Capital Adequacy Framework require Alliance Islamic Bank Berhad ("Bank") to maintain an adequate level of capital to withstand potential losses arising from its operations. BNM's Capital Adequacy Framework cover three main aspects:

- (a) Pillar 1 - covers the calculation of risk-weighted assets for credit risk, market risk and operational risk;
- (b) Pillar 2 - involves assessment of other risks (e.g. rate of return risk in the banking book, liquidity risk and concentration risk) not covered under Pillar 1. This promotes the adoption of forward-looking approaches to capital management and stress testing / risk simulation techniques; and
- (c) Pillar 3 - covers disclosure and external communication of risk and capital information by banks.

The Pillar 3 Disclosure for the financial year ended 31 March 2026 for the Bank is in accordance with BNM's Capital Adequacy Framework for Islamic Banks ("CAFIB") - Disclosures Requirements (Pillar 3).

Bank has adopted the Standardised Approach for credit risk and market risk; and and BNM's standard computation method for operational risk in determining the capital requirements of Pillar 1.

1.1 Medium and Location of Disclosure

The Pillar 3 Disclosure will be made available under the Investor Relations section of the Group's website at www.alliancebank.com.my/islamic/home and as a separate report in the annual and half-yearly financial reports.

1.2 Basis of Disclosure

The Bank's Pillar 3 Disclosure is governed by the Bank's Pillar 3 Disclosure Policy. This policy outlines the minimum disclosure standards, the approach for determining the appropriateness of information disclosed and the internal controls over the disclosure process. Pillar 3 Disclosure is to be read in conjunction with the Bank's financial statements for the financial year ended 31 March 2026. Whilst this document discloses the Bank's assets both in terms of exposures and capital requirements, the information disclosed herein may not be directly comparable with the information in the financial statements for the financial year ended 31 March 2026 published by the Bank.

These disclosures have been reviewed and verified by Group Internal Audit and approved by the Board of Directors ("Board").

1.3 Comparative Information

The corresponding Pillar 3 Disclosure in the preceding reporting period would be as at 31 March 2025.

BASEL II PILLAR 3 REPORT
FOR THE FINANCIAL YEAR ENDED 31 MARCH 2026

1.0 Overview (cont'd.)

1.4 Scope of Application

The Pillar 3 Disclosure provided in this document is in respect of the Bank, which is involved in Islamic banking financial services.

There are no significant restrictions or other major impediments on transfer of funds or regulatory capital between the Bank and its holding company, Alliance Bank Malaysia Berhad ("ABMB").

There were no capital deficiencies in the Bank as at financial year end.

2.0 Capital

The Bank maintains a strong capital base to support its current activities and future growth, to meet regulatory capital requirements at all times and to buffer against potential losses.

The Bank's Internal Capital Adequacy Assessment Process ("ICAAP") covers the following:

- (a) Assesses inherent risks in the business against risk captured under Pillar 1, and risks not sufficiently or not captured under Pillar 1;
- (b) Estimates the potential impact of extreme but plausible events on the Group's earnings, balance sheet and capital via stress testing;
- (c) Sets internal capital targets which include buffers to cushion potential stress losses and contingency plan(s) where warranted; and
- (d) Regularly monitors and reports portfolio risk profiles, required capital and available capital.

ICAAP results are regularly reported to Group Risk Management Committee ("GRMC") and the Board to facilitate proactive capital management.

2.0 Capital (cont'd.)

2.1 Capital Adequacy Ratios

The capital adequacy ratios of the Bank are computed in accordance with Bank Negara Malaysia's Capital Adequacy Framework. The Framework sets out the approach for computing regulatory ratios, as well as the levels of those ratios at which banking institutions are required to operate. The Framework is to strengthen capital adequacy standards, in line with the requirement set forth under Basel III. The risk-weighted assets of the Bank are computed using the Standardised Approach for credit risk and market risk, and BNM's standard computation method for operational risk.

(a) The Bank has sufficient capital as follows:

	2026	2025
<u>Before Deducting Proposed Dividends</u>		
CET 1 Capital Ratio	12.745%	13.334%
Tier 1 Capital Ratio	13.471%	14.146%
Total Capital Ratio	16.333%	17.195%
<u>After Deducting Proposed Dividends</u>		
CET 1 Capital Ratio	12.408%	12.889%
Tier 1 Capital Ratio	13.134%	13.701%
Total Capital Ratio	15.996%	16.750%

The Bank's capital ratios comply with the prescribed capital adequacy ratios under BNM's Capital Adequacy Framework for Islamic Banks.

2.0 Capital (cont'd.)

2.2 Capital Structure

The total regulatory capital of the Bank consists of eligible Tier 1 and Tier 2 capital satisfying the requirements laid out in BNM's Guideline on Capital Adequacy Framework for Islamic Banks (Capital Components).

Common Equity Capital ("CET1"), a component of Tier 1 capital, has the highest Loss-Absorption capability which consists of ordinary share capital, retained profits and reserves, net of regulatory adjustments.

Other forms of regulatory capital maintained by the Bank (in addition to CET1) include additional Tier 1 capital instruments and Tier 2 capital such as subordinated obligations, surplus eligible provisions over expected losses and general provisions.

The following tables present the components of CET 1, Tier 1 and Tier 2 capital under the Capital Adequacy Framework:

	2026	2025
	RM'000	RM'000
<u>CET 1 Capital/Tier 1 Capital</u>		
Paid-up Share Capital	727,065	727,065
Retained Profits	1,080,535	970,783
Other reserves (Note 2)	135	-
Financial Investments at Fair Value Through Other Comprehensive Income ("FVOCI") Reserves	3,032	(1,112)
	<u>1,810,767</u>	<u>1,696,736</u>
(Less)/Add: Regulatory Adjustments		
- Intangible Assets	(1,498)	(1,653)
- Deferred Tax Assets	(51,973)	(51,619)
- 55% of FVOCI Reserves	(1,667)	-
	<u>1,755,629</u>	<u>1,643,464</u>
Total CET I Capital		
Additional Tier 1 Sukuk Wakalah	<u>100,000</u>	<u>100,000</u>
Total Additional Tier 1 Capital	<u>100,000</u>	<u>100,000</u>
Total Tier I Capital	<u><u>1,855,629</u></u>	<u><u>1,743,464</u></u>
<u>Tier 2 Capital</u>		
Subordinated Sukuk Murabahah	230,000	230,000
Expected Credit Losses and Regulatory Reserves (Note 1 & Note 3)	164,184	145,786
Total Tier 2 Capital	<u>394,184</u>	<u>375,786</u>
Total Capital	<u><u>2,249,813</u></u>	<u><u>2,119,250</u></u>

Note 1: Regulatory reserves represent Bank's compliance with BNM Revised Policy Documents in Financial Reporting for Islamic Banking Institutions effective 1 April 2018 whereby the Bank must maintain in aggregate, loss allowance for non-credit-impaired exposures and regulatory reserves of no less than 1% of total credit exposures, net of loss allowance for credit-impaired exposures.

Note 2: The Bank implemented Long-Term Incentive Plan ("LTIP") on 23 October 2025, which was approved by the shareholders at its Extraordinary General Meeting held on 30 July 2025. The salient detail of the LTIP is set out in Note 39 to the Financial Statements.

Note 3: Expected credit losses ("ECL") for S1 and S2 only.

2.0 Capital (cont'd.)

2.3 Risk Weighted Assets ("RWA") and Capital Requirements

Regulatory Capital Requirements

The following table presents the minimum regulatory capital requirements of the Bank:

2026 Exposure Class	Gross Exposures RM'000	Net Exposures RM'000	Risk- Weighted Assets RM'000	Capital Requirements RM'000								
(a) Credit Risk												
On-Balance Sheet Exposures:												
Sovereigns/Central Banks	1,821,744	1,821,744	-	-								
Public Sector Entities Banks, Development Financial Institutions ("DFIs") and Multilateral Development Banks	333,529	333,529	31,468	2,517								
Takaful Companies, Securities Firms and Fund Managers	1,605,673	1,605,673	320,120	25,610								
Corporates	74,804	74,804	72,555	5,804

	<u>1,030,059</u>	<u>947,106</u>	<u>824,536</u>	<u>65,963</u>
Total On and Off-Balance Sheet Exposures	<u>20,562,802</u>	<u>20,203,426</u>	<u>11,662,851</u>	<u>933,028</u>
(b) Market Risk (Section 5.0)				
Profit Rate Risk	Long Position	Short Position		
Foreign Exchange Risk	-	-	-	-
	-	(301)	301	24
	-	(301)		
Option Risk			11,550	924
Total			<u>11,851</u>	<u>948</u>
(c) Operational Risk				
	-	-	650,216	52,017
Total	<u>20,562,802</u>	<u>20,203,426</u>	<u>12,324,918</u>	<u>985,993</u>

Note: The Bank does not use Profit-sharing Investment Account ("PSIA") as a risk absorbent mechanism.

The Bank does not have exposure to any Large Exposure Risk for equity holdings specified in BNM's Guidelines on Investment in Shares, Interest-in-Shares and Collective Investment Schemes.

3.0 Risk Management

The Board and the Management of the Bank are committed towards ensuring that the Bank's corporate objectives are supported by a sound risk strategy with an effective risk management framework that is appropriate to the nature, scale and complexity of the Bank's activities.

3.1 Risk Management Framework

The Bank's risk management framework recognises the diversity of the organisation's activities by balancing the Board's strong supervision with well-defined independent risk management functions within each business area. The Bank's Risk Management framework is embedded in our respective business activities in order to integrate risk-taking and decision-making with prudent risk management principles. It provides a structured approach for the Bank to form a consolidated and aggregated view of all risks identified at entity, business segment and product levels; and to manage these risks in a holistic manner alongside business objectives and compliance requirements.

3.2 Risk Governance and Organisation

The Bank adopts the Three Lines of Defence model in managing risks collectively. The Three Lines of Defence comprises the following:

- (a) 1st Line of Defence, whereby the risk taking role is played by Business Units and aided by Business Support functions;
- (b) 2nd Line of Defence, whereby the independent risk control role is played by Group Risk Management and Group Compliance (inclusive of the Shariah Review Team); and
- (c) 3rd Line of Defence, whereby the independent risk assurance role is played by Group Internal Audit.

The governance structure adopted within the Group provides a transparent and effective system that promotes active involvement from the Board and Senior Management in the risk management process to ensure a uniform view of risk across the Group.

The Board established the GRMC to assist the Board to oversee risk-related and compliance-related frameworks, strategies, policies and methodologies.

The Executive Risk Management Committee ("ERMC") and other Management Committees oversee and advise the Management on risk-related matters including risk policies, to support the sustainability of the Bank.

3.3 Risk Strategy

The Bank establishes appropriate risk governance, processes and controls in order to pursue its strategic business objectives with confidence, to protect its balance sheet and stakeholders' interest, and to deliver sustainable profitability. While it may not be possible or feasible to eliminate all inherent risks within the Bank, a set of risk mitigation techniques has been established to reduce the impact of these risks.

3.4 Risk Appetite

Risk Appetite describes the high-level risk parameters and thresholds the Bank is willing to assume in pursuit of its strategic business objectives. These high-level thresholds are then cascaded, where appropriate, into more granular limits and targets across the various portfolios and business units.

3.5 Risk Culture

Our Board members, Senior Management and staff are all ambassadors of the Bank's risk culture. Hence, the Bank employs the key elements of leadership, supervision, guidance, counselling and communication to shape and cultivate a desirable risk culture.

3.6 Risk Management Process

The Bank's risk management process embeds the Bank's culture and practices. It starts with risk identification, followed by risk assessment, risk mitigation and control, risk monitoring, risk reporting, escalation and disclosure. The risk management processes of different types of risks are explained in the following sections.

4.0 Credit Risk

Credit risk is the risk of financial loss resulting from the failure of the Bank's customers or counterparties to fulfil their contractual obligations to pay their financing or to settle financial commitments. Credit risk arises mainly from financing and advances activities and holding of debt securities.

Credit Risk Management

The Board, via the GRMC, established a Master Credit Policy ("MCP") which outlines the broad principles for managing credit risk of the Group.

Credit approval is under the purview of the Executive Committee, Group Management Credit Committee and Credit Underwriters, depending on the size and complexity of the financing.

Retail financing are subject to portfolio reviews and corporate financing are subject to periodic individual borrower or group reviews. The Portfolio Review Committee for the respective lines of business, assisted by embedded risk units, helps to manage the portfolio quality, and formulates action plans to manage identified risks. The process also ensures alignment of business strategy with the Bank's risk appetite.

Potential problem financing or issues related to portfolios are identified through our Early Warning Framework and thematic reviews, where applicable. Impaired loans are recovered internally or through authorised agents.

In the aspect of credit risk measurement, quantitative tools such as application and behavioural scorecards (for retail financing) and credit rating model (for corporate financing) play an integral role in supporting risk informed pricing, underwriting and portfolio management strategies. In order to manage model risk and ensure that the models remain fit-for-purpose, periodic model validations of all credit models are carried out by an independent validation team within Group Risk Management. The broad principles and framework governing the validation of credit models are set out in the Independent Model Validation Framework. Validation covers both quantitative and qualitative aspects of the model, such as back-testing to assess model performance and accuracy, as well as qualitative evaluation of rating system operations, model design, governance and data quality.

Entity-level Risk Dashboards are escalated to the ERM (Senior Management Level), GRMC (Board Level) and the Board for deliberation and strategic direction.

Group Risk Management is responsible for assessing the adequacy and effectiveness of the risk management framework, policies and guidelines. Embedded risk units are responsible for monitoring business activities and ensuring that they are carried out within the approved policies and business models.

Group Risk Management also performs periodic post approval credit reviews on a sampling basis covering the Consumer, Small and Medium Enterprises ("SME"), Corporate and Commercial portfolios to independently assess the quality of credit practices across the Group. The review reports are presented to the GRMC and Group Audit Committee for their notation. Status of all outstanding issues are tracked until closure.

Stress testing is used to identify potential vulnerable risk areas of the Bank's portfolios to stress events and assess the impact to earnings and capital. Stress tests are performed using a variety of market and economic assumptions to assess possible vulnerability and to formulate effective mitigation actions when required. Sensitivity analyses are conducted to assess the potential effect of individual risk factors.

Group Internal Audit reviews the Bank's credit processes regularly and recommends corrective measures or enhancements. These reviews provide Senior Management with the assurance that the policies, processes and guidelines are adhered to.

Impaired Financing and Provisions

Past due accounts are loan accounts with any payment of principal and/or profit due and not paid, but are not classified as impaired. Financing are classified as impaired if the mandatory impairment thresholds are exceeded or judgmentally impaired when there are reasonable grounds to believe that the borrower may not be able to repay the entire financing amount.

Provisions for expected credit losses are carried out based on the MFRS 9 approach, financing with defined risk characteristics are transferred to Stage 2 and provisions are estimated based on potential losses for the remaining lifetime of the exposures. Impaired loans are classified as Stage 3 under MFRS 9. Financing that are not classified as Stage 2 or 3 will remain in Stage 1 where provisions will be estimated based on the probability of default over the next 12 months.

Please refer to Note 2(h)(i) of the audited financial statements for accounting policies on impairment of financial assets.

4.0 Credit Risk (cont'd.)

4.1 Distribution of Credit Exposures

(a) Geographical Distribution

The following tables represent the Bank's major types of gross credit exposure by geographical distribution. Exposures are allocated to the region in which the branch is located and are disclosed before taking into account any collateral held or other credit enhancements and after allowance for impairment, where appropriate.

2026	Geographical region					
	Northern RM'000	Central RM'000	Southern RM'000	Sabah RM'000	Sarawak RM'000	Total RM'000
Exposure Class

ALLIANCE ISLAMIC BANK BERHAD
200701018870 (776882-V)

4.0 Credit Risk (cont'd.)

4.2 Impaired Financing and Advances and Allowance for ECL Analysis

Impaired financing and advances are exposures where the customers have failed to make a principal and/or profit payment for more than three months. In addition, where customers are deemed incapable of continuing repayment obligations, the exposures will be judgmentally impaired. Where exposures are restructured or rescheduled due to increase in credit risk, the exposures are also classified as impaired.

Past Due but Not Impaired Financing and Advances Analysis

Past due but not impaired financing and advances are exposures where the customers have failed to make a principal and/or profit payment when contractually due, and include exposures which are due one or more days after the contractual due date but not more than three months. Under MFRS 9, exposures more than 30 days past due are transferred to Stage 2. For exposures that are structured to pay principal and/or profit at quarterly intervals or longer, a default of payment will trigger an impairment.

4.0 Credit Risk (cont'd.)

4.3 Assignment of Risk-Weights for Portfolios Under the Standardised Approach (cont'd.)

For the purpose of determining counterparty risk-weights, the Bank uses external credit assessments from Rating Agency Malaysia ("RAM"), Malaysian Rating Corporation Berhad ("MARC"), Standard and Poor's ("S&P"), Moody's, Fitch Ratings, and Rating and Investment Information, Inc ("R&I" [See Note 1]). In the context of the Bank's portfolio, external credit assessments are mainly applicable to banks/financial institutions and rated corporations. The Bank follows the process prescribed under BNM Capital Adequacy Framework for Islamic Banks (CAFIB)-Basel II to map the ratings to the relevant risk weights. The ratings are monitored and updated regularly to ensure that the latest and most appropriate risk-weights are applied in the capital computation.

The following tables show the rated credit exposures according to ratings by approved External Credit Assessment Institutions ("ECAIs"), or as prescribed under the CAFIB:

Long-Term Rating

Rating Category	S&P	Moody's	Fitch	RAM	MARC	R&I*
1	AAA to AA-	Aaa to Aa3	AAA to AA-	AAA to AA3	AAA to AA-	AAA to AA-

4.0 Credit Risk (cont'd.)

4.4 Credit Risk Mitigation ("CRM")

The group generally does not extend credit solely based on collateral. Instead, credit facilities are granted based on customers' creditworthiness. Collaterals that are eligible for credit risk mitigation will be accepted only after their marketability, liquidity, legal enforceability, transferability and stability of values are accessed in accordance with the Group's policy on collateral valuation. The policy also prescribes the frequency of valuation for different collateral/security types, based on liquidity and volatility of the collateral value and the underlying product or risk exposures.

As a practical approach towards mitigating credit risk, the Bank accepts a wide range of collaterals. The main types of collateral acceptable to the Bank include cash, guarantees, commercial and residential real estates, and physical collateral/ financial collateral, e.g. motor vehicles or shares. Guarantees are accepted only when the financial standing of the guarantors have been ascertained.

However, for capital computation purposes, the BNM's Capital Adequacy Framework apply more restrictive rules on collaterals that qualify as credit risk mitigants. As a result, not all of the collaterals accepted by the Bank can be used to reduce the Bank's capital adequacy requirement.

The following tables represent the Bank's credit exposure including off-balance sheet items under the standardised approach, the total exposure (after, where applicable, eligible netting benefits) that is covered by eligible guarantees and credit derivatives; and eligible collateral after haircuts, allowed under the Capital Adequacy Framework for Islamic Banks.

2026 Exposure Class	Exposures	Exposures covered by guarantees/ credit derivatives (Note 1)	Exposures covered by eligible financial collateral	Exposures covered by other eligible collateral

4.0 Credit Risk (cont'd.)

4.5 Off-Balance Sheet Exposures and Counterparty Credit Risk

Off-balance sheet exposures of the Bank are mainly from the commitments to extend credit including the unutilised or undrawn portions of credit facilities.

The off-balance sheet exposures and their related counterparty credit risk of the Bank are as follows:

	Principal Amount	Credit Equivalent Amount	Risk- Weighted Assets
	RM'000	RM'000	RM'000

5.0 Market Risk

For Islamic banking, market risk refers to fluctuations in values of tradable, marketable or leaseable assets (including sukuk) and in off-balance sheet individual portfolios such as restricted investment accounts. This risk relates to the current and future volatility of market values of specific assets, e.g. the market value of a Sukuk or Murabahah assets purchased to be delivered over a specific period; and of foreign exchange rates.

5.1 Market Risk Management

The Board, via the GRMC provides oversight on market risk management activities. Its responsibilities include reviewing and approving risk management policies, risk exposures and limits whilst ensuring the necessary infrastructure and resources are in place.

At Senior Management level, the Group Assets and Liabilities Management Committee ("GALCO") manages the Group's market risk by reviewing and recommending market risk frameworks and policies; ensuring that market risk limits and parameters are within the approved thresholds; and aligning market risk management with business strategy and planning.

Organisationally, market risks are managed collectively via the Three Lines of Defence concept. Group Financial Markets, as the risk taking unit assumes ownership of the risk and manages the risk within the approved policies, risk limits and parameters as set by the GRMC or GALCO. The risk control function is undertaken by Group Risk Management which provides independent monitoring, valuation and reporting of the market exposures. This is supplemented by periodic review by Group Internal Audit.

The Group's Market Risk Management ("MRM") Framework has been established to manage risks from proprietary trading, treasury Asset Liability Management ("ALM"), and strategic investments, ensuring that market-taking activities align with long-term sustainable business objectives and safeguard capital stability.

Acting as the second line of defence, Group Risk Management provides independent oversight by monitoring and reporting portfolio exposures against the Risk Appetite Statements ("RAS") and ensuring any triggers or breaches are promptly escalated to senior management for resolution. This is supplemented by periodic review by Group Internal Audit.

5.2 Traded Market Risk

For the Bank, market risk is managed using an integrated approach which involves the following processes:

- (a) Identification of market risk in new products and changes in risk profiles of existing exposures;
- (b) Assessment of the type and magnitude of market risks which takes into account the activity and market role undertaken;
- (c) Adoption of various market risk measurement tools and techniques to quantify market risk exposures; and
- (d) Scheduled and exception reporting on market risk exposures.

The Group's market risk exposures are primarily in fixed income securities, foreign exchange and financial derivatives, under Group Financial Markets. Trading positions are held intentionally for short-term resale and with the intent of benefiting from actual or expected short-term price movements while banking book positions are held until maturity or as available-for-sale. Hence, these positions are susceptible to market movements.

These exposures are governed by approved policies, risk limits and parameters which are set vis-à-vis the Group's risk appetite and strategy. Besides that, treasury activities are monitored and reported independently by Group Market Risk on a daily basis. Market risk limits, exposures as well as any limit breaches or exceptions are reported to GALCO, ERM, and GRMC. The risk measures are outlined below:

- (a) Value-at-Risk ("VaR"): The Group has adopted the historical simulation approach where historical scenarios are generated based on actual past market movements from End-of-Day ("EoD") position. The VaR estimation is derived by calculating the maximum potential loss of a portfolio over one-day horizon at 99% confidence level with the assumption that returns follow a normal distribution. The Group currently adopts the hypothetical Profit & Loss ("P&L") approach to back-test and validate the VaR model. Hypothetical P&L refers to the simulated P&L that is generated by applying the day's price movements to the previous day's EoD portfolio.
- (b) Price Value of a Basis Point ("PV01") Limit: PV01 measures the sensitivity of the portfolio to adverse movements in profit rates. This limit is expressed in terms of potential losses to the entire portfolio for an adverse one basis point movement in profit rates.
- (c) The Total Net Open Position ("NOP"): The NOP limits represent the maximum permissible amount of net open position that the FX Spot & Swap Trading Desk dealers can maintain at any point in time.

5.0 Market Risk (cont'd.)

5.2 Traded Market Risk (cont'd.)

- (d) Gamma and Vega Limits for FX and Profit Options: Gamma value parameter of an option is a risk parameter that measures the changes of the portfolio Delta due to changes in the underlying Spot value. Vega risk of an option measures and computes the changes in portfolio value due to parallel shift in volatility surface.
- (e) Others: Other limits include Stop Loss Limits, Tenure Limits and Transaction Limits. These limits provide additional control on the trading portfolio. In addition, stress testing is conducted to gauge and identify potential vulnerability risk areas of a bank's portfolio in accordance with a range of stressed scenarios or sensitivity analysis. It provides a forward looking assessment of risk exposures under stressed conditions which enables the Bank to assess potential worst case scenarios and develop appropriate management actions and contingency plans.

Hedging Policies and Strategies

The Bank had established a policy which outlines the broad principles and policies governing hedging activities by the Bank. Generally, the Bank enters into hedges to manage or reduce risk exposures. All hedging strategies in the trading and banking book are approved by the GALCO and monitored independently by Group Market Risk Management. Further, all hedging strategies are designated upfront and recorded separately under the hedging portfolios. Hedging positions and effectiveness, if any, are monitored and reported monthly to Senior Management.

The following actions describe the financial hedges that may be entered into to mitigate the profit rate risk exposures of the Bank.

- (a) Fair value hedge
 The Bank use profit rate swaps to hedge its exposure to changes in the fair value of bonds.
- (b) Cash flow hedge
 The Bank use foreign currency swaps (hedging instrument) to hedge the foreign exchange risks (USD) arising from the foreign currency interbank borrowing (hedged item) denominated in USD.

Please refer to Note 2(e) of the audited Financial Statements for fair value hedge for further details.

Market risk capital charge

The Market Risk Capital Charge ("MRCC") is computed based on the standardised approach which are largely from exposures in Islamic bonds/ sukuk, if any.

Regulatory capital requirements

The Risk-Weighted Assets ("RWA") and capital requirements for the various categories of risk under market risk are as follows:

	Risk- Weighted Assets	Capital Requirements
	RM'000	RM'000

	11,851	948
	<hr/> <hr/>	<hr/> <hr/>

5.0 Market Risk (cont'd.)

5.3 Non-Traded Market Risk

Non-traded market risk is the inherent risks arising from banking book activities. The primary risk factors include rate of return risk in the banking book.

5.3.1 Rate of Return Risk in the Banking Book

Rate of Return Risk in the Banking Book ("RORBB") is the risk that occurs when movements in profit rates affect a banking organisation's earnings or economic value. Profit rate changes affect the Bank's earnings by altering profit rate-sensitive income and expenses, affecting its Net Profit Income ("NPI"). It also affects the underlying value of banking assets, liabilities and off-balance sheet instruments as the present value of future cash flows changes when there are changes in profit rate.

Risk Governance

RORBB is managed collectively by GALCO, Group Financial Markets, Group Finance and Group Risk Management. Each of these parties has defined roles and responsibilities to provide oversight and manage RORBB within the defined framework and structure as approved by the GRMC/Board. GALCO assumes the overall responsibility in managing RORBB by setting the directions, strategy and risk limits/parameters for the Bank. Group Financial Markets is tasked to execute the strategies as approved by GALCO to manage the assets/liabilities as well as the funding and liquidity needs of the Bank/Group where the Group and its entities have operated above the minimum regulatory requirement for Liquidity Coverage Ratio ("LCR") and Net Stable Funding Ratio ("NSFR"). Group Finance and Group Risk Management provide support in respect of risk monitoring and reporting of the banking book exposures; and ensuring regulatory as well as accounting requirements are met.

Group Risk Management performs independent monitoring of the profit rate benchmarks guided by BNM's guidelines and Basel standards on management of RORBB to protect the Group's capital and earnings from the profit rates risk that may impact the assets and liabilities in banking book. Any exceptions are reported to Senior Management, GRMC, and the Board and appropriate remedial actions are taken, where necessary.

RORBB Management

The guiding principles in managing RORBB include:

- (a) Adopting a prudent approach in managing RORBB by establishing framework and policies, commensurate with the Group's size and business activities. This is complemented by active monitoring and reporting;
- (b) Assessment and quantification of risks to ensure accuracy and that any emerging risks are identified, monitored and escalated to governance and management committees;
- (c) Establish risk mitigation or control plan i.e set up ALM limits monitoring such as Economic Value Evaluation ("EVE") impact over Tier 1 Capital and Earning at Risk ("EaR") impact over NPI to monitor on a regular basis.
- (d) Practising comprehensive RORBB reporting and review process, with aggregated information and supporting details to facilitate the assessment of the Group's sensitivity to changes in market conditions.

The Bank uses a range of tools, including the following primary measures to quantify and monitor RORBB:

- (a) Repricing gap analysis to measure profit rate from the earnings perspective, i.e. impact of profit rate changes to earnings in the short term;
- (b) Net profit income simulations to assess the impact of profit rate changes on short term earnings volatility;
- (c) Economic value ("EV") simulations that measure the asset-liability impact of adverse profit rate movements on the economic value of the Bank's capital; and
- (d) Product behavioural testing is applied regularly to ensure the risk assessment is able to withstand any market profit rate changes within the risk tolerance of the Bank.

The measures rely on key assumptions such as the behaviour of profit rates, the re-pricing characteristics and stability of indeterminate or non-maturity deposits and financing as well as changes in financing and deposit product balances influenced by various behavioural characteristics under different profit rate scenarios.

5.0 Market Risk (cont'd.)

5.3 Non-Traded Market Risk (cont'd.)

5.3.1 Rate of Return Risk in the Banking Book (cont'd.)

The following tables present the Bank's projected sensitivity shock based on standard scenario as outlined in BNM's Reporting Requirements for Rate of Return Risk in the Banking Book Policy Document issued on 30 June 2020 across all maturities applied on the Bank's rate of return sensitivity gap as at reporting date.

	MYR RM'000	USD RM'000	SGD RM'000	Other Foreign Currencies ("FCY") RM'000	Total RM'000
2026					
Impact on NPI					
Parallel 200 bps up	49,827	-	-	-	49,827
Parallel 200 bps down	(49,827)	-	-	-	(49,827)
Impact on EV					
Parallel 200 bps up	(104,440)	-	-	-	(104,440)
Parallel 200 bps down	104,440	-	-	-	104,440
Steeper	(92,680)	-	-	-	(92,680)
Flattener	75,001	-	-	-	75,001
Short Rate Up	(25,309)	-	-	-	(25,309)
Short Rate Down	25,309	-	-	-	25,309
	MYR RM'000	USD RM'000	SGD RM'000	Other FCY RM'000	Total RM'000
2025					
Impact on NPI					
Parallel 200 bps up	50,661	-	-	-	50,661
Parallel 200 bps down	(50,661)	-	-	-	(50,661)
Impact on EV					
Parallel 200 bps up	(86,605)	-	-	-	(86,605)
Parallel 200 bps down	86,605	-	-	-	86,605
Steeper	(105,928)	-	-	-	(105,928)
Flattener	89,561	-	-	-	89,561
Short Rate Up	(10,914)	-	-	-	(10,914)
Short Rate Down	10,914	-	-	-	10,914

The reported amounts do not capture the impact of business growth or of management actions as the impact is based on the balance sheet as at reporting date. In reality, GALCO seeks to proactively change the profit attributable to rate of return risk to minimise losses and maximise revenue.

Actual dates may differ from contractual dates for both financing and deposit owing to prepayments/premature withdrawals. When possible and material, financing prepayments and deposit premature withdrawals are generally estimated based on past statistics and trends. The impact on NPI and EV are measured on a monthly basis for the Bank and quarterly for the Group, both of which are reported to GALCO and the Group Risk Management Committee.

5.0 Market Risk (cont'd.)

5.3 Non-Traded Market Risk (cont'd.)

5.3.2 BNM Liquidity Coverage Ratio ("LCR")

Liquidity risk can be defined as the risk where an entity is unable to fund increases in assets and meet financial obligations as they come due without incurring unacceptable losses. Liquidity risk measures are usually expressed in the form of various liquidity risk measurement ratios and triggers.

It is essential to adopt a conservative and prudent approach in the measurement of liquidity risk. This is achieved by the establishment of robust liquidity risk management policies, measures and strategies that are complemented by regular monitoring and reporting process.

The liquidity risk management references BNM's LCR to gauge its liquidity exposure, complemented with BNM's Net Stable Funding Ratio ("NSFR") which requires the Group to maintain sufficient liquidity, including a cushion of unencumbered, High Quality Liquid Assets ("HQLA") to withstand a range of stress events.

The Group is in compliance with the minimum regulatory requirements ratio to LCR and NSFR within the period from April 2025 to March 2026.

The following tables show the LCR and NSFR positions and are presented on average basis. The average position is calculated as the simple average of past 12 monthly observations in that financial period.

	2026	2025
In RM'000		
Average HQLA	3,394,520	3,529,099
Average Cash Outflow	2,668,290	2,414,760
Average Cash Inflow	664,693	493,541
Average Net Cash Outflow	2,003,597	1,921,219
Average LCR Ratio %	169.42%	183.69%

6.0 Operational Risk

Operational risk is the risk of direct or indirect financial loss resulting from inadequate or failed internal processes, people and systems or from external events. It includes legal risk but excludes strategic and reputational risks.

Operational Risk Management

Management, escalation and reporting of operational risks are instituted through the Group Operational and Technology Risk Management Committee ("GOTRC"), ERM, and GRMC as well as the Board.

The Board, via GRMC provides oversight on operational risk management activities.

At Senior Management level, GOTRC manages the day-to-day operational risk exposures. The roles and responsibilities of GOTRC include:

- (a) Providing strategic guidance on operational issues and monitoring the implementation of Operational Risk
- (b) Reviewing and monitoring operational risk issues, reports and action plans;
- (c) Evaluating and agreeing on initiatives to strengthen operational processes or infrastructure; and
- (d) Promoting risk awareness and operational risk management culture.

The Group practises operational risk management as outlined in the ORM Framework, in accordance with Basel and regulatory guidelines. The Group applies operational risk tools and methodologies in the identification, assessment, measurement, control and monitoring of operational risks. Other efforts by the Group include the ORM awareness training which is given to all staff, and regular business continuity and disaster recovery plans.

The Group's operational risk management process is depicted in the table below:

Identification	Identify the various risks inherent to each product, process and activity, as well as adverse trends of risk parameters
Assessment	<ul style="list-style-type: none"> - Risk Control Self-Assessment ("RCSA") - Controls Testing ("CT") - Key Risk Indicators ("KRI") - Loss Event Data ("LED") - Scenario Analysis ("SA")
Mitigation & Control	<ul style="list-style-type: none"> - Set risk mitigation measures and controls - Insurance/takaful - Outsourcing - Business Continuity Management
Reporting	<ul style="list-style-type: none"> - Escalate and highlight regular operational risk reports to Senior Management and the Board - Highlight new/emerging risk areas and the controls in place
Disclosure	Provide regular risk disclosure to regulators through the Pillar 3 disclosure report and regulatory reports on operational risk, e.g. Operational Risk Reporting ("ORR") reporting

6.0 Operational Risk (cont'd.)

Operational Risk Management (cont'd.)

The customary tools employed by the Group for the management of operational risk are:

- (a) **RCSA** - An operational risk tool that is used to identify and assess risks inherent in the Group's operations and to evaluate the overall effectiveness of the internal controls in mitigating the identified risks;
- (b) **CT** - Complements the RCSA process by validating the effectiveness of the controls measures identified and highlight control lapses;
- (c) **KRI** - A quantitative and statistical parameter, often financial in nature and focuses on business processes and activities to identify emerging risks and potential changes in operational risk profiles;
- (d) **LED** - The process of collecting, evaluating, monitoring and reporting operational risk events, loss amount and irregularities; and
- (e) **SA** - Assessment made to identify potential operational risk events and potential outcomes including identifying potential significant operational risks and the need for additional risk management, controls or mitigation solutions.

For operational risk capital charge, the Group and Bank applies BNM's standard computation as per the Capital Adequacy Framework (Operational Risk) policy document.

7.0 Shariah Governance Disclosures

Shariah Non-Compliance Risk is the risk of loss that arise from the risk of failure to comply with Shariah rules and principles as determined by the Shariah Advisory Council of BNM and the Bank's Shariah Committee. To manage the risks, the Bank has adopted the following guiding principles:

- (a) A sound Shariah Compliance Framework which governs the operations of the Bank and outlines the roles of key functionalities within the Bank, including but not limited to the Shariah risk management process. This is in line with the Shariah governance policy document issued by BNM;
- (b) The Board of Directors, assisted by the Shariah Committee and Senior Management, provides oversight on Shariah compliance aspects of the Bank's overall operations. This, amongst others, includes:
 - Oversight and implementation of the Shariah Compliance Framework;
 - Regular review of Shariah non-compliant income and issues;
 - Addressing Shariah non-compliance findings; and
 - Ensuring compliance with regulatory and internal requirements including disclosures.
- (c) Appointment of a qualified Shariah Committee member who also serves as AIS Board member; serving as a 'bridge' between the Board and the Shariah Committee;
- (d) Ongoing Shariah reviews and training to raise risk awareness and ensure compliance to Shariah rules and principles. This includes:
 - Regular assessment on Shariah compliance in the activities and operations of the Bank. The findings of the review are reported to the Shariah Committee for deliberation and decision;
 - Performing research and studies on Shariah issues, including providing day-to-day Shariah advice and consultancy to relevant parties; and
 - Conducting Shariah-related training and ongoing engagement with relevant parties to raise awareness on Shariah non-compliance risk.
- (e) Escalation and reporting processes of Shariah non-compliant income and issues governed through designated escalation channels, which include the Board and Shariah Committee; and
- (f) Periodic engagement between the Board and the Shariah Committee to discuss Shariah research, Shariah compliance and the views of scholars on Islamic banking activities.

Shariah Non-Compliant Income and Events

During the period under review, there were no Shariah non-compliance events ("SNCE") detected.

With reference to the previous SNCE reported in FY2024, involving the house financing product of Alliance Islamic Bank (the Bank) based on Bai' Bithaman Ajil (BBA) for properties under construction that breached BNM's Murabahah Policy Document and Circular on Implementation of Shariah Advisory Council (SAC)'s Resolution on Bai 'Inah, the remediation exercise for the affected accounts has been duly completed. Approximately 99% of the affected active accounts have been successfully remediated, while the remaining 1% could not be remedied, thereby requiring the purification of the income derived from those accounts in accordance with Shariah requirements.

Meanwhile, the purification actions are currently still in progress. For the financial year ended 31 March 2026, the Bank had purified RM3,698,320, bringing the cumulative purification amount to RM4,778,920 of the Shariah non-compliant income generated from closed accounts to charitable and religious bodies. A remaining total of RM6,000,998 of profit had been provisioned for future purification exercise.
