## **United Global Transformation Fund** - AUD Hedged Class

### MARKET ENVIRONMENT

Global equities had a weak start to the guarter, impacted by broad US tariff hikes and swift retaliation. Markets rebounded mid-April as the US announced a 90-day tariff pause to revive negotiations. Nevertheless, US debt concerns and Israel-Iran tensions late in the quarter kept investors cautious. Against this backdrop, US equities gained on strong earnings and renewed rate cut hopes. Europe ex UK advanced due to growing investor interest in undervalued markets amid rotation away from the idea of US exceptionalism. Furthermore, increased defence spending boosted sentiment. Pacific ex Japan and emerging markets were supported on the back of improving risk appetite and increased foreign inflows. Meanwhile, UK and Japanese equities also edged higher. At a sectoral level, information technology and communication services led the gains, while energy and healthcare were the notable laggards. Most IT sub-sectors rose during the quarter, with semiconductors & semiconductor equipment and software leading the gainers. The technology hardware, storage & peripherals segment was the only to record negative returns.

### PERFORMANCE ATTRIBUTION OF TARGET FUND

The fund (A-Euro) returned 6.8% during the quarter, compared to 13.5% for the comparative index. Stock selection in the semiconductors & semiconductor equipment and software segments detracted from performance, but was partially compensated for by security selection in technology hardware, storage & peripherals.

#### **Kev detractors**

The lack of exposure to Al-focused semiconductor major Nvidia was the biggest detractor from relative returns as its shares rose after the company reported strong Q1 FY26 results. While Nvidia is a strong business led by a high-quality management team, as the portfolio manager has stated before, good companies don't always make great investments if there is limited margin of safety. The lack of exposure to another semiconductor group Broadcom also relative returns as its shares were driven by renewed interest in the semiconductor sector.

#### Notable contributors

On a positive note, the underweight stance in consumer technology major Apple supported relative performance. Its shares declined due to a soft outlook for the iPhone 17 and delayed AI payoff. Apple's announcements at the Worldwide Developers Conference (WWDC) 2025, particularly regarding its AI initiatives like Apple Intelligence and the Siri overhaul, were seen as underwhelming compared to competitors. This raised concerns about Apple's competitiveness in the rapidly evolving Al sector. Shares in Microchip Technology, a leading provider of smart, connected, and secure embedded control solutions for industrial, automotive, and communications sectors, appreciated following the announcement of better-than-expected fiscal 2025 earnings and an optimistic outlook for Q1 2026.

## **FUND POSITIONING**

The fund is invested in a wide variety of themes within the portfolio. It is underweight widely-known AI semiconductor players as the Portfolio Manager sees limited upside in these names at current valuation levels. Instead, the portfolio has exposure to underappreciated AI players. Specifically, the manager avoids companies that have benefited directly from the infrastructure buildout, such as Nvidia and Broadcom. Instead, he focuses on suppliers that were not part of the initial infrastructure cycle but stand to gain as technology adoption rises, for example, those involved in Al inferencing at the edge or serving enterprise needs, including HDD (hard disk drive) storage and enterprise hardware.

### Notable trades

During the quarter, the manager bought a new position in Monolithic Power Systems, a long-term market share gainer in the analog semiconductor industry. Near-term weakness in the Al server segment created a buying opportunity. The company also reported strong 1Q25 results and future revenue growth is expected to be driven by automotive and storage/ computing segments. He also added a position in semiconductor company Marvell Technology, whose shares have sharply de-rated due to concerns over competition, but the company's AI optionality remains substantial and its non-data centre business is at a cyclical trough. Marvell is a broad-based provider of infrastructure semis and a key play on the 5G infrastructure ramp. The positions in NXP Semiconductors and ASML Holdings were closed as the manager consolidated positions in semis and found better opportunities elsewhere.
